DETAILED ACTION

This is the second Office Action on the merits responsive to the filing of the pending application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

3. Claim 130 is objected to because of the following informalities:
 - Change "said nozzle" in line 2 to --said nozzles--.
 - Change "sacrificial layers" in line 3 to --sacrificial layer--.

Appropriate correction is required.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225

Art Unit: 2853

USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 130-137 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 6,273,544. Although the conflicting claims are not identical, they are not patentably distinct from each other because the nozzle rims are formed as a result of the deposition of a rim material layer and subsequent planar etching of the rim material layer so as to form the nozzle rim as can be seen in both claims 1 in the application and the patent. For the dependent claims 131-137, they are similar compared to claims 2-8 of the patent.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

7. Claims 130 and 133 are rejected under 35 U.S.C. 102(e) as being anticipated by Chwalek et al (US 6,022,099).

Regarding claim 130, Chwalek et al discloses in Figures 1(b) and 1(c) an inkjet printhead (16) having a series of nozzles for the ejection of ink wherein each of the nozzles has a rim (54) formed by the deposition of a rim material layer (column 4, lines 35-38) over a sacrificial layer (50) and a subsequent planar removal of at least the rim material layer so as to form the nozzle rim (54).

Regarding claim 133, it is also disclosed that the planar removal process is an etching process (column 4, lines 35-37).

Response to Arguments

8. Applicant's arguments with respect to claims 130-137 have been considered but are moot in view of the new ground(s) of rejection.
